Questions

# Summary

THE UNIVERSITY OF  
WESTERN AUSTRALIA  
*Achieve International Excellence*

- ▶ Vector graphics allow scaling but not arbitrary scaling
- ▶ We implemented a vector graphics viewer that does allow arbitrary scaling
- ▶ ... but it will take an arbitrary amount of time

Motivation & Background  
Implementing a Basic SVG Viewer  
Live Demo  
Conclusions  
References  
Questions

# Graphics Formats

- ▶ Document formats (eg: PDF and SVG) are formats for vector graphics
- ▶ Vector graphics scale better than raster graphics

VECTOR GRAPHICS

RASTER GRAPHICS

# Why is there a zoom limit?

Questions

# Why is there a zoom limit?

- ▶ SVG, PostScript, PDF specify IEEE-754 *single* floating point number representations
- ▶ Range of values:  $\approx 3 \times 10^{-38} \rightarrow 3 \times 10^{+38}$
- ▶ Rough Floating Point Definition<sup>1</sup>:

$$X = m \times 2^E \quad (1)$$

- ▶  $m$  and  $E$  are encoded in a *fixed length* string of bits
- ▶ Floating Point  $\approx$  Scientific Notation for computers

---

<sup>1</sup>IEEE-754 is more complicated

# Visualisation of Floats

- ▶ With total length of  $m$  and  $E$  limited to 7 bits (1 sign bit)
- ▶ Showing positive numbers only

# Floating point calculations go wrong

- ▶ At scale of only  $1 \times 10^{-6}$ , the fox is very sick

Top Left: (0.5,0.5)  
Width: 1e-06  
Zoom: 1e+08 %

- ▶ Plank Length:  $1.61 \times 10^{-35}$  metres  $> 3 \times 10^{-38}$
- ▶ Size of Universe:  $4.3 \times 10^{26}$  metres  $\ll 3 \times 10^{38}$
- ▶ Why isn't this good enough for  $1 \times 10^{-6}$

# Structure of Vector Graphics

- ▶ Bézier Curve (Quadratic or Cubic Parametric Polynomial)
- ▶ Path of Bézier Curves → Shapes (with fill)
- ▶ Shapes include font glyphs, like this  $\mathcal{L}$

# Structure of Vector Graphics III

THE UNIVERSITY OF  
WESTERN AUSTRALIA  
*Achieve International Excellence*

- ▶ Rectangles show individual Bézier forming outline of the Fox

Top Left: (0.608112,0.375531)  
Width: 0.157238  
Zoom: 635.98 %

Questions

# Live Demo

THE UNIVERSITY OF  
WESTERN AUSTRALIA  
*Achieve International Excellence*

- ▶ We can import standard SVGs wherever we want
- ▶ If we are willing to wait long enough
- ▶ "... But, asks the scientist, what does that turtle stand on? To which the lady triumphantly answers: 'You're very clever, young man, but it's no use – it's turtles all the way down!.'"

Motivation & Background  
Implementing a Basic SVG Viewer

Questions

# Conclusions

- ▶ What we have done?
  - ▶ Implemented a basic SVG viewer
  - ▶ Demonstrated how precision affects rendering vector graphics
  - ▶ Using GMP rationals, demonstrated the ability to render SVGs scaled to an arbitrary position in a document
- ▶ Possible future work
  - ▶ Implement more of the SVG standard
  - ▶ Trial alternative number representations
  - ▶ Allow for saving and loading SVGs with arbitrary precision

# Q: Why don't you have colour?

- ▶ We do!<sup>2</sup>
- ▶ A complete implementation of SVG is “future work”

<sup>2</sup>If you are willing to wait long enough

# Q: Why not just use doubles?

THE UNIVERSITY OF  
WESTERN AUSTRALIA  
*Achieve International Excellence*

- ▶ Any fixed precision format will still give inexact results
- ▶ But the inexact results will appear slower

# Q: Arbitrary precision floats?

- ▶ We support them as well!
- ▶ Rationals are more convenient:
  - ▶ Need to manually set precision
  - ▶ Some operations require infinite precision:

$$\frac{1}{3} = 0.3333333333333333333333333333 \dots \times 10^0 \quad (2)$$

- ▶ How do you choose when to increase precision?
- ▶ Could be future work
